- User = TDM
- Password = database

Course File Share

- When working within a network, we can access files/folders that exist on other computers (i.e. servers). This is essentially what 'The Cloud' is, a reference to where data/files live.
 - When working within the UWyo firewall, you have to be authenticated (the Domain = uwyo, then your user/pwd)
 - Very important to understand that if using a personal laptop, but connected to Uwyo network, must include the Domain (e.g. uwyo\user; then pwd)
 - Windows
 - \\klondike\shannon\$\TDM
 - Create your own subdirectory
 - Permissions/Security???
 - Mac (<http://support.apple.com/kb/HT5884>)
 - smb://klondike/shannon\$/TDM
- Just like using your desktop, you need to remember where you placed your files. The computer can only do what you tell it to.
